PROFESSIONAL SUMMARY

Data Science Consultant with over 8 years specialized in applying AI, machine learning, and data engineering methods to cybersecurity use cases including threat detection, hunting, and response. Expert in modernizing cyber data platforms, building RAG/LLM-powered analytics solutions, and delivering client-facing insights that enhance security operations visibility and decision-making across regulated industries.

EDUCATION

Masters in Data Analytics (STEM) 08/2024 – 12/2025
Clark University; Worcester, MA, GPA: 3.93

WORK EXPERIENCE

Titans Space Industries Florida, USA
AI/ML Engineer Feb2026 – June2026

- Designing ML models for perception, classification of orbital objects using sensor and telemetry data in simulations, improving detection accuracy by 35% for autonomous navigation

Resilience Inc Florida, USA
Google Analytics Associate (Internship) Aug 2025 – Sep 2025

- Managed ad performance analytics projects within a technology industry setting, mentoring team members on SQL BigQuery techniques and boosting CTR by 30%

Ernst and Young LLP India
Senior Consultant May 2021 – Aug 2024

- Built production SQL pipelines and advanced analytics models for life sciences and healthcare clients, delivering 25% faster insights and supporting security/compliance analytics platforms
- Re-architected large-scale datasets into optimized structures for improved visibility and decision-making, reducing costs by 25% while enabling AI-ready security operations.

Opteamix LLC India
Senior Software Engineer Aug 2020 – May 2021

- Engineered end-to-end data pipelines in SQL/Python for claims and risk analytics, improving data accuracy and threat/response processing by 22%
- Developed client-facing analytical reports and automation solutions enhancing operational resilience in regulated finance environments

Deluxe Services Pvt Ltd India
Senior Software Engineer Sep 2018 – Aug 2020

- Developed scalable data pipelines and analytics solutions using SQL and Python for streaming platforms, boosting performance monitoring and anomaly detection by 22%

SKILLS

Technical: Cybersecurity Analytics, Cyber Defense, Threat Detection, Security Operations, Machine Learning, Artificial Intelligence, Data Engineering, RAG, LLMs, Embeddings, Vector Databases, SQL, Python, ETL Pipelines, Data Modeling, BigQuery, Cloud Technologies, Telemetry Analysis, Anomaly Detection, Predictive Modeling, Statistical Analysis, Client Deliverables, Generative AI, LangChain, PyTorch, Streamlit, FastAPI, GitHub, Production Analytics, Risk Analytics

Soft Skills: Team leadership, Project Management, Data-driven Decision-making, Problem Solver, Cross-Functional Collaboration, Quick learner, Mentoring, Stakeholder Partnership, Excellent communication skills.

CERTIFICATIONS

AWS Cloud Practitioner (2025) Advanced Data Science (2024)

PROJECTS

1. **AI-Powered Threat Detection Engine**

Built an ML-based anomaly detection system using Python, PyTorch, and telemetry data pipelines for real-time threat identification, achieving 89% detection accuracy and reducing false positives by 35% in simulated security operations

2. **RAG-Enabled Cyber Threat Intelligence Assistant**

Developed a Retrieval Augmented Generation application with LLMs, embeddings, LangChain, and FAISS vector database to support threat hunting and response, improving query response accuracy to 86% and analyst productivity by 70%.
